

Empower Your Trading Application through Simulation

PhiFIX Simulator Suite (PSS) by Sensiple, regarded as Best in class FIX simulation platform allows simulating the counterparty applications via configuring and initiating FIX listener sessions with various versions. This FIX listener session in turn allows to connect FIX Client Sessions, validate client request and simulate client response from the Listener Session. This suite supports the actions across Sell-Side, Venues and Buy-Side trading situations.

Given the number of similar simulation products in the market, it becomes necessity for trading companies to be well educated about each product to arrive at the best decision of deploying simulation software. Competitive analysis (unveiled below) of similar simulation products, based on key functionalities demonstrates how PhiFIX Simulator Suite achieves an edge over other tools.

PhiFIX Simulator Suite (PSS), a world class robust technology on market simulation takes control of FIX testing. It allows emulation of counterparty workflows giving the ability to easily manage testing and execution of self-generated FIX messages, thereby relieves trading companies of being dependent on busy third parties, waiting around for counterparties testing environment to be ready or even missing testing slots.
