

BIG DATA

Add value to your data

Businesses are eager to take a ride on the massive data and harness it for intelligence input. They are standing out in the competition by tracking granular level of data and feeding it for analysis which in turn generates inputs for predicting business decisions.

Key Challenges

- Big data is really big and businesses cannot afford to miss out on any information that will be of worth to their analysis.
- Infrastructure doesn't usually support data storage scalability limiting the capabilities of analytics. Data lost or transformed due to capacity crunch is a severe restraint on exploring opportunities.
- Data architecture should be flexible enough to sort chunks of data on business priorities for immediate retrieval, cache or durable storage.

Sensiple Solutions

Big Data Consulting

Sensiple's Big Data Strategy helps to streamline massive amount of unstructured data to improve business processes through valuable insights that accelerates better and informed business decision making.

Big Data Implementation and Support Services

Sensiple's Big Data Strategy roadmap consulting leverages its experienced information technology experts. Sensiple's consulting team works through a series of workshops with the stakeholders across business domains and solution.

Product Migration/Upgrade and Migration of Legacy Content

Sensiple's expertise in migrations from legacy system is well-equipped to help develop a migration roadmap. Sensiple's phased approach in increased utilization of data and creating market differentiators are its core competencies.

Cloud Readiness Assessment

Identifies the cloud opportunities that align with the organizations business goals and the value levers to make most of the investment and assess the readiness for adoption of the cloud.

Support & Maintenance

Sensiple leverages its expertise in monitoring, managing and handling high data velocity. Integrating complex Integrations is its key value add.

Big Data Competency Centre

To leverage the potential of Big Data and the myriad benefits that it provides Sensiple's competency is set up with a vision to bring in skilled resources to embark with solutions that matter to the industry.

Proof of Technology

Sensiple's big data COE is formed to bring the expertise within the organization to work on customer pain points and provide use case based solutions.

Solution Development

Sensiple's capabilities in quickly identifying risks and opportunities improve predictive capabilities of a system. Sensiple's big data solutions group is based on the use cases that it is important to bring a cost effective solution to our customer.

Value Proposition

- Sensiple solutions are derived from expertise and experience on Big Data and Analytics and therefore migration of your business to Big Data platforms shall be a smooth walk. Our solutions eliminate the randomness of big data and help you to speed up your time to go-to-market. We aid IT infrastructure to converge competences around harvesting big data and extract meaningful insights out of it without compromising on the storage capabilities.
